

## Implementing Microsoft Azure Infrastructure Solutions (20533)

**Duration:** 5 Days

**MOC On-Demand Price:** CDN\$1,095

**Delivery Option:** Attend via [MOC On-Demand](#)

### Students Will Learn

- Describing Azure architecture components, including infrastructure, tools and portals
- Implementing and managing virtual networking within Azure and configure cross-premises connectivity
- Planning and creating Azure VMs
- Configuring, managing and monitoring Azure VMs to optimize availability and reliability
- Implementing Azure App Service
- Planning and implementing storage, backup, and recovery services
- Implementing container-based workloads in Azure
- Deploying, configuring, monitoring and diagnose cloud services
- Implementing Azure AD
- Managing an Active Directory infrastructure in a hybrid environment
- Automating operations in Azure by using Azure Automation runbooks

### Course Description

This is a Microsoft Official Course (MOC) and includes Microsoft courseware and hands-on labs. This course teaches IT professionals how to provision and manage services in Microsoft Azure. Students will learn how to implement infrastructure components such as virtual networks, virtual machines, containers, web and mobile apps, and storage in Azure. Students also will learn how to plan for and manage Azure AD, and configure Azure AD integration with on-premises Active Directory domains. Audience profile This course is intended for IT professionals who have some knowledge of cloud technologies and want to learn more about Azure.

This course is intended for:

- IT professionals who want to deploy, configure, and administer services, containers, and virtual machines (VMs) in Azure
- IT professional who use Microsoft System Center to manage and orchestrate server infrastructure
- Windows Server administrators who are looking to evaluate and migrate on-premises Active Directory roles and services to the cloud
- IT professionals who want to use Azure to host websites and mobile app back-end services

- IT professionals who are experienced in other non-Microsoft cloud technologies, meet the course prerequisites, and want to cross-train on Azure

The secondary audience for this course includes IT professionals who take this course as preparation material for exam [Exam 70-533: Implementing Microsoft Azure Infrastructure Solutions](#).

## Course Prerequisites

Before attending this course, students must have:

- Equivalent knowledge or completion of the Microsoft Certified Systems Administrator (MCSA) certification in Windows Server 2012 or Windows Server 2016
- Understanding of on-premises virtualization technologies, including: VMs, virtual networking, and virtual hard disks
- Understanding of network configuration, including: TCP/IP, Domain Name System (DNS), virtual private networks (VPNs), firewalls, and encryption technologies.
- Understanding of websites, including: how to create, configure, monitor and deploy a website on Internet Information Services (IIS)
- Understanding of Active Directory concepts, including: domains, forests, domain controllers, replication, Kerberos protocol, and Lightweight Directory Access Protocol (LDAP)
- Understanding of resilience and disaster recovery, including backup and restore operations

## About MOC On-Demand

Microsoft Official Courses On-Demand uses a combination of streaming video, text, lab exercises and assessment checks throughout the course. MOC On-Demand courses are available for 90 days and recommend the following system requirements:

- Browser: Current version of Internet Explorer, Microsoft Edge, Google Chrome or Firefox
- Internet: Broadband Internet connection of over 4Mbps
- Screen Resolution: 1280 x 1024 or higher

## Course Overview

### Module 1: Introduction to Azure

This module introduces cloud solutions in general and then focuses on the services that Azure offers. The module goes on to describe the portals that you can use to manage Azure subscriptions and services before introducing the Azure PowerShell modules and Azure Command Line Interface (CLI) as scripting technologies for managing Azure. Finally, the module provides explanations and guidance for the use of the classic and Azure Resource Manager deployment models.

#### Lessons

- Cloud technology overview
- Overview of Azure
- Managing Azure with the Azure portal
- Managing Azure with Windows PowerShell

## Managing Azure with Azure CLI

- Overview of Azure deployment models
- Managing and monitoring Azure resources

### Labs

- Using the Azure portals
- Using the Azure Resource Manager features in the Azure portal
- Using Azure PowerShell
- Using Azure CLI

### After completing this module, students will be able to:

- Identify suitable apps for the cloud
- Identify the services and capabilities that Azure provides
- Use Azure portals to manage Azure services and subscriptions
- Use Azure PowerShell and Azure CLI to manage Azure services and subscriptions
- Use Azure Resource Manager to manage Azure resources
- Use Azure management services to manage and monitor Azure resources

## Module 2: Implementing and Managing Azure Networking

This module explains how to plan virtual networks in Azure and implement and manage virtual networks. It also explains how to configure cross-premises connectivity and connectivity between virtual networks in Azure. Additionally, it explains how to configure an Azure virtual network and provides an overview of Azure classic networking.

### Lessons

- Overview of Azure networking
- Implementing and managing virtual networks
- Configuring an Azure virtual network
- Configuring virtual network connectivity
- Overview of Azure classic networking

### Labs

- Creating an Azure virtual network by using a deployment template
- Creating a virtual network by using Azure PowerShell
- Creating a virtual network by using Azure CLI
- Using the Azure portal to configure VNet peering
- Configuring VNet peering-based service chaining
- Validating virtual network connectivity

### After completing this module, students will be able to:

- Plan virtual networks in Azure
- Implement and manage virtual networks
- Configure cross-premises connectivity and connectivity between virtual networks in Azure
- Configure an Azure virtual network
- Describe Azure classic networking

## Module 3: Implementing Virtual Machines

This module introduces the fundamentals of Azure VMs, and discusses the different ways

in which you can deploy and manage them.

## Lessons

- Overview of Azure VMs
- Planning deployment of Azure VMs
- Deploying Azure VMs
- Overview of classic Azure VMs

## Labs

- Creating Azure VMs by using the Azure portal, Azure PowerShell, and Azure CLI
- Validating Azure VM deployment
- Using Visual Studio and an Azure Resource Manager template to deploy Azure VMs
- Using Azure PowerShell and an Azure Resource Manager template to deploy Azure VMs
- Using Azure CLI and an Azure Resource Manager template to deploy Azure VMs

## After completing this module, students will be able to:

- Describe the main characteristics of Azure VMs
- Plan for Azure VM deployments
- Deploy Azure VMs
- Describe the main characteristics of classic Azure VMs

## Module 4: Managing Azure VMs

This module explains how to configure and manage Azure VMs, including configuring virtual machine disks and monitoring Azure VMs.

## Lessons

- Configuring Azure VMs
- Managing disks of Azure VMs
- Managing and monitoring Azure VMs
- Managing classic Azure VMs

## Labs

- Implementing Desired State Configuration (DSC)
- Implementing Storage Spaces-based volumes

## After completing this module, students will be able to:

- Configure Azure VMs
- Manage Azure VM disks
- Manage and monitor Azure VMs
- Manage classic Azure VMs

## Module 5: Implementing Azure App Service

This module explains the different types of apps that you can create by using the Azure App Service, and how you can select an App Service plan and deployment method for apps in Azure. It also explains how to use Microsoft Visual Studio, File Transfer Protocol (FTP) clients, Azure PowerShell, and Azure CLI to deploy Azure web and mobile apps. Additionally, the module explains how to configure web apps and use the Azure WebJobs

feature to run custom tasks. It also explains how to monitor the performance of web apps and create and configure mobile apps. Lastly, this module explains how to use Azure Traffic Manager to distribute requests between two or more app services.

### **Lessons**

- Introduction to App Service
- Planning app deployment in App Service
- Implementing and maintaining web apps
- Configuring web apps
- Monitoring web apps and WebJobs
- Implementing mobile apps
- Implementing Traffic Manager

### **Labs**

- Creating web apps
- Deploying web apps
- Managing web apps
- Implementing Traffic Manager

### **After completing this module, students will be able to:**

- Explain the different types of apps that you can create by using App Service
- Create a service plan and select a deployment method for App Service apps in Azure
- Use Visual Studio, FTP clients, Azure PowerShell, and Azure CLI to deploy web and mobile apps to Azure
- Configure web apps and use the Azure WebJobs feature to run custom tasks
- Monitor the performance of web apps
- Create and configure mobile apps
- Use Azure Traffic Manager to distribute requests between two or more app services

## **Module 6: Planning and Implementing Storage, Backup and Recovery Services**

This module explains how to plan and implement storage, backup, and recovery services. It explains how to choose appropriate Azure Storage options to address business needs and how to implement and manage Azure Storage. It also explains how to improve web-application performance by implementing Azure Content Delivery Networks (CDNs). Lastly, this module explains how to protect cloud-resident and on-premises workloads by using Azure Backup and Azure Site Recovery.

### **Lessons**

- Planning storage
- Implementing and managing Azure Storage
- Implementing Azure CDNs
- Implementing Azure Backup
- Planning and implementing Azure Site Recovery

### **Labs**

- Creating and configuring Azure Storage
- Using Azure File storage
- Protecting data with Azure Backup

### **After completing this module, students will be able to:**

- Choose appropriate Azure Storage options to address business needs
- Implement and manage Azure Storage
- Improve web application performance by implementing Azure CDNs
- Protect cloud-resident and on-premises workloads by using Azure Backup and Azure Site Recovery

## **Module 7: Implementing Containers in Azure**

This module explains how to implement containers in Azure. It starts by introducing the concept of containers and presents different options for implementing containers on Windows and Linux Azure VMs. Next, it explains container orchestration in the context of Azure Container Service (ACS) and describes how to use ACS to deploy Docker Swarm, Kubernetes, and DC/OS clusters.

### **Lessons**

- Implementing Windows and Linux containers in Azure
- Implementing Azure Container Service

### **Labs**

- Implementing Windows and Linux containers in Azure
- Deploying containers to Azure VMs
- Deploying multicontainer applications with Docker Compose to Azure VMs
- Implementing Azure Container Registry
- Creating an ACS cluster
- Managing an ASC cluster

### **After completing this module, students will be able to:**

- Implement Windows and Linux containers in Azure
- Implement Azure Container Service

## **Module 8: Implementing Azure Cloud Services**

This module explains how to plan and deploy Azure Cloud Services. It also explains how to manage and maintain Azure Cloud Services.

### **Lessons**

- Planning and deploying Azure Cloud Services
- Managing and maintaining Azure Cloud Services

### **Labs**

- Deploying a cloud service
- Configuring deployment slots and Remote Desktop Protocol (RDP)
- Monitoring cloud services

### **After completing this module, students will be able to:**

- Plan and deploy Azure Cloud Services
- Explain how to manage and maintain Azure Cloud Services.

## Module 9: Implementing Azure Active Directory

This module explains how to implement Azure AD. It explains how to create and manage Azure AD tenants. It also explains how to configure single sign-on (SSO) for cloud applications and resources, and implement Azure Role-Based Access Control (RBAC) for cloud resources. Lastly, it explains the functionality of Azure AD Premium, and how to implement Azure Multi-Factor Authentication.

### Lessons

- Creating and managing Azure AD tenants
- Configuring application and resource access with Azure AD
- Overview of Azure AD Premium

### Labs

- Administering Azure AD
- Configuring SSO
- Configuring Multi-Factor Authentication
- Configuring SSO from a Windows 10-based computer

### After completing this module, students will be able to:

- Create and manage Azure AD tenants
- Configure SSO for cloud applications and resources, and implement RBAC for cloud resources
- Explain the functionality of Azure AD Premium and implement Azure Multi-Factor Authentication

## Module 10: Managing an Active Directory Infrastructure in a Hybrid Environment

This module explains how to manage Active Directory in a hybrid environment. It explains how to extend an on-premises Active Directory domain to Azure infrastructure as a service (IaaS) environments and synchronize user, group, and computer accounts between on-premises AD DS and Azure AD. This module also explains how to set up SSO by using federation and pass-through authentication between on-premises Active Directory and Azure AD.

### Lessons

- Extending an on-premises Active Directory domain to Azure IaaS
- Implementing directory synchronization by using Azure AD Connect
- Implementing SSO in hybrid scenarios

### Labs

- Configuring directory synchronization
- Synchronizing directories

### After completing this module, students will be able to:

- Extend an on-premises Active Directory domain to Azure IaaS environments
- Synchronize user, group, and computer accounts between on-premises AD DS and Azure AD
- Set up SSO by using federation and pass-through authentication between on-premises Active Directory and Azure AD

## **Module 11: Implementing Azure-Based Management and Automation**

This module explains how to implement Azure-based management and automation. It explains how to implement Microsoft Operations Management Suite (OMS) solutions and Azure Automation. The module also describes how to create different types of Azure Automation runbooks and implement Azure Automation-based management by using runbooks.

### **Lessons**

- Implementing OMS
- Implementing Azure Automation
- Implementing Automation runbooks
- Implementing Azure Automation-based management

### **Labs**

- Configuring Automation accounts
- Creating runbooks

### **After completing this module, students will be able to:**

- Implement OMS solutions
- Implement Azure Automation
- Implement different types of Azure Automation runbooks
- Implement Azure Automation-based management
