

## Linux System Administration

**Duration:** 5 days (*Face-to-Face & Remote-Live*), or 35 Hours (*On-Demand*)

**Price:** CDN\$3,275 (*Face-to-Face & Remote-Live*), or CDN\$1,995 (*On-Demand*)

**Discounts:** We offer multiple discount options. [Click here](#) for more info.

**Delivery Options:** Attend face-to-face in the classroom, [remote-live](#) or [on-demand training](#).

### Students Will Learn

- Installing the Linux operating system and configuring peripherals
- Performing and modifying startup and shutdown processes
- Configuring and maintaining basic networking services
- Creating and maintaining system users and groups
- Understanding and administering file permissions on directories and regular files
- Planning and creating disk partitions and file systems
- Performing maintenance on file systems
- Identifying and managing Linux processes
- Automating tasks with cron
- Performing backups and restoration of files
- Working with system log files
- Troubleshooting system problems
- Analyzing and taking measures to increase system performance
- Configuring file sharing with NFS
- Configuring Samba for file sharing with the Windows clients
- Setting up a basic Web server
- Understanding the components for setting up a LAMP server
- Implementing basic security measures

### Course Description

Students learn how to install, configure and maintain an Enterprise Linux system in a networked environment. Basic administrative tasks are covered such as: creating and managing users, creating and maintaining file systems, determining and implementing security measures and performing software installation and package management. Linux networking topics include installing and supporting SSH, NFS, Samba and the Apache Web server. Common security issues are discussed and several software tools are introduced such as the PAM modules that help secure the operating system and network environment. Comprehensive hands on exercises are performed throughout the course to reinforce

learning and develop skills and competency. Upon successful completion of this course, students will be prepared to maintain Linux systems in a networked business environment.

Although the course includes installing and configuring a CentOS 7 / RHEL 7 Linux system, much of the course content also applies to Oracle, Ubuntu, Scientific and other current versions of mainstream Linux distributions. Labs include user and group maintenance, system backups and restoration, software management, administration tasks automation, file system creation and maintenance, managing remote access, working with cron, and configuring basic file sharing and Web services, as well as working with system logging utilities such as rsyslog and much more.

## Course Prerequisites

Experience with common UNIX/Linux user-level commands, such as for moving, copying and editing files. Experience with the vi editor is a plus. Attendance at the [UNIX/Linux Fundamentals](#) course provides a solid foundation.

## Course Overview

### System Administration Overview

- UNIX, Linux and Open Source
- Duties of the System Administrator
- Superusers and the Root Login
- Sharing Superuser Privileges with Others (`su` and `sudo` Commands)
- TCP/IP Networking Fundamentals
- Online Help

### Installation and Configuration

- Planning: Hardware and Software Considerations
- Site Planning
- Installation Methods and Types
- Installation Classes
- Partitions
- Logical Volume Manager - LVM
- File System Overview
- Swap Partition Considerations
- Other Partition Considerations
- The Linux Boot Loader: `grub`
- Software Package Selection
- Adding and Configuring Peripherals
- Printers
- Graphics Controllers
- Basic Networking Configuration
- Booting to Recovery Mode

### Booting and Shutting Down Linux

- Boot Sequence
- The `systemd` Daemon
- The `systemctl` Command
- Targets vs. Run Levels
- Modifying a Target
- Service Unit Scripts
- Changing System States
- Booting into Rescue Mode
- Shutdown Commands

### Managing Software and Devices

- Identifying Software Packages
- Using `rpm` to Manage Software
- Using `yum` to Manage Software
- Installing and Removing Software
- Identifying Devices
- Displaying Device and System Information (PCI, USB)
- Plug and Play Devices
- Device Configuration Tools

### Managing Users and Groups

- Setting Policies

### The Linux File System

- Filesystem Types

- User File Management
- The `/etc/passwd` file
- The `/etc/shadow` file
- The `/etc/group` file
- The `/etc/gshadow` file
- Adding Users
- Modifying User Accounts
- Deleting User Accounts
- Working with Groups
- Setting User Environments
- Login Configuration Files

- Conventional Directory Structure
- Mounting a File System
- The `/etc/fstab` File
- Special Files (Device Files)
- Inodes
- Hard File Links
- Soft File Links
- Creating New File Systems with `mkfs`
- The `lost+found` Directory
- Repairing File Systems with `fsck`
- The Journaling Attribute
- File and Disk Management Tools

## Linux File Security

- File Permissions
- Directory Permissions
- Octal Representation
- Changing Permissions
- Setting Default Permissions
- Access Control Lists (ACLs)
- The `getfacl` and `setfacl` commands
- SUID Bit
- SGID Bit
- The Sticky Bit

## Working with the Linux Kernel

- Linux Kernel Components
- Types of Kernels
- Kernel Configuration Options
- Recompiling the Kernel

## System Backups

- Backup Concepts and Strategies
- User Backups with the `tar` Command
- System Backup Options
- The `xfsdump` and `xfrestore` Commands

## Basic Networking

- Networking Services Overview
- NetworkManager Introduction
- Network Configuration Files Locations and Formats
- Enabling and Restarting Network Services with `systemctl`
- Configuring Basic Networking Manually
- Configuring Basic Networking with NetworkManager

## Controlling Processes

- Characteristics of Processes
- Parent-Child Relationship
- Examining Running Processes
- Background Processes
- Controlling Processes
- Signaling Processes
- Killing Processes
- Automating Processes
- `cron` and `crontab`
- `at` and `batch`
- System Processes (Daemons)

## Shell Scripting Overview

- Shell Script Fundamentals
- Bash Shell Syntax Overview
- Shell Script Examples

## Troubleshooting the System

- Common Problems and Symptoms
- Troubleshooting Steps
- Repairing General Boot Problems
- Repairing the GRUB 2 Boot Loader
- Hard Drive Problems
- Restoring Shared Libraries
- System Logs and `rsyslogd`

## LAMP Server Basics

- LAMP Overview
- Configuring the Apache Web Server
- Common Directives
- Apache Virtual Hosting
- Configuring an Open Source Database
  - MySQL
  - MariaDB
- PHP Basics
- Perl CGI Scripting

## Introduction to System Security

- Security Overview
- Maintaining System Security
- Server Access
- Physical Security
- Network Security
- Security Tools
- Port Probing with `nmap`
- Intrusion Detection and Prevention
- PAM Security Modules
- Scanning the System
- Maintaining File Integrity
- Using Firewalls
- Introduction to `firewalld`

## Networked File Systems (NFS)

- Using NFS to Access Remote File Systems
- Configuring the NFS Server
- Configuring the NFS Client
- Exporting File Systems from the NFS Server to the NFS Client

## The Samba File Sharing Facility

- Configure Samba for Linux to Linux/UNIX File Sharing
- Configure Samba for Linux to Windows File Sharing
- Use the `smbclient` Utility to Transfer Files
- Mount/Connect Samba Shares to Linux and Windows Clients
